Every now and then you cross a game for your Windows phone which is simple, fun and a great time waste. Metro Pipes seems to be one of those type games. Metro Pipes are rotated around to erase a path from point a point B. The game has two modalities, speed and puzzles, to keep things to get stale and play it has its challengeMetro Pipes takes some time to get used to navigation and game goals. It doesn't take long to get the blocking of things and then Metro Pipes develops some of an engaging quality to it. The main menu offers options to play both the game mode, view the game settings and access the screens of about and help. Metro Pipes has Scoreloop (opens in a new tab) integration, which can be deactivated in the Options menu. Each game mode, he presented himself with a tutorial screen that explains the different aspects of the game. Once you have a handle on things, press the rear button to start. Game with pipes meter is quite simple. You have a collection of pipes that include elbows and straight sections. Touch to rotate the pipes to make connections. Create a series of connections from entry and output points, the pipes start buckle and things go boom (which is not good). Speed modalities on Metro Pipes has your water -racing water to make all the right connections. To make things difficult, you have a variety of tubes that have unique effects. For example, some pipes can only be rotated a limited number of times. Once that limit has been reached, the section is otser otser li erevlosir rep opmet 'Aip Ad iv ehc etanerd onos euqca elled enucla, ibut i erarebmogs e aticsu id e atartne id itnup i onagelloc is ertnem. enoizisop ni the puzzles. You have to keep the water at bay high until the water meter is exhausted (basically a timer) and therefore you can advance at the next level. As the tubes in speed modalities are canceled, the additional pipes will populate the scoreboard and earn the tubes inventory pipes can be exchanged with pipe sections on the scoreboard. The inventory pipes is a series of levels in which, once again, it is necessary to move the pipes to connect the entrance and exit points. To complete the level and advance, you will have to delete a certain number of pipes that are indicated before starting the level and in the upper right corner of the game screen. While you may not run against the increasing waters, in modalities Puzzle the pipes do not fill up, so you will have to choose your moves a little More carefully. It is possible to remove too many pipes and prevent additional connections between the two points. The Puzzle modality is a slower option compared to the speed of speed, but the weather is still fundamental as you will be classified according to The rapid elimination of the set number of pipes. The game is demanding, simple graphics and metropolitan. But there is room for improvement. While there are help sections that make you point re in the right direction, I could not help but feel that these screens needed more information. Maybe a diagram of what is in any way of playing. It is the other suggestion that I would have to move the position of the water meter to the modality speed. It took me a few minutes to understand where it was and I think that moving it to run along the lower or top of the screen could help with the game. There is a little compelling quality in the game once you understand the game. game. Pipes is supported by the advertisement but adve free game supported by advertising that you can find here (open in the new tab) the Windows Phone market. Key: diameter according to EN 10 210-2 Specific external diameter standard wall thickness according to EN 10220-steel pipes seamlessly and welded- Dimensions and masses per unit length. This standard has replaced existing national standards DIN, BS, NF A and other standards. The Dimensions are listed in other precision tube tables. Depending on the size of the outer diameters, the thickness of the walls and their combinations are the tubes (final Dimensions) produced by the design). The technological production potential of the pipe production method is also influenced by the requirements of customers on the technical parameters of the pipes. Information - Hot Finishes The tubes are supplied by Podbrezova; with an external diameter of ¥ 26.9 mm and thickness of the edge of the production of pipes (e.g. thick walls) on arrangement. Other dimensions and precision tubes are produced by cold forming (drawingcold).
